

Corporate PPA Management

Designing the ideal energy purchasing strategy to suit your needs

A CPPA is a long-term contract in which a company agrees to buy electricity directly from a renewable generator for a set period at a certain price. The common grid connected renewable energy generators are solar or wind farms.

How it Works

Private agreement between a generator and offtaker (buyer) for the purchase of renewable electricity.

Negotiation of power price and embedded benefits between parties.

Short or long-term agreements available, typically 5 - 20 years.

Power can be metered by offtaker, supplier and sleeved into import agreement.

Renewable certificates are provided as part of the contracts for the proof of power origin.

Security of power price for fixed term versus negotiating every year in volatile markets.

Benefits

✔ Price Discount

Most CPPA's are priced at a discount to current wholesale market projections in order to secure funding.

✔ Meet Carbon Reduction Targets

Renewable electricity guarantee certificates (REGO's) will be used to offset carbon emissions and move the company towards Net Zero.

✔ Transparency

CPPA's offer clear proof that your organisation's power is from renewable sources.

✔ Corporate Social Responsibility

CPPA's are a simple way of directly supporting renewable energy projects and make a powerful statement about the nature of your company.

✔ Budget Certainty

CPPA's typically cover a period of 5-20 years and the price can be fixed throughout the period.

✔ Portability

You can still change energy suppliers and take your CPPA with you when you move your supply contract.

Benefits of working with Trident

Driven by our company values with a tireless purpose for over 20 years to Make Energy Simple, we've built a reputation for excellent customer service and a client centric approach.

Assistance with contract negotiation to establish market accurate levels for power prices, embedded benefits and any associated subsidies.

Invoice validation for generator invoices, certificate statements and supplier export statements.

Query resolution with generator and supplier.

Analysis of benefits/loss versus market prices.

Manage certificate transfer from generator to supplier.

Monthly revenue forecast reports, customer calls and quartley meetings.
